Derwent Title: Hypoxic-therapy respiration device - atmospheric air collector is formed by rotating valve mounted on lid of body, and made with communication slot

Original Title: SU1599026A1: RESPIRATION APPARATUS FOR HYPOXYTHERAPY

Assignee: SAMOLOVOV YU I Individual

Inventor: SAMOLOVOV Y U I; STRELKOV R B;

Accession/Update: 1991-183671 / 199125

IPC Code: A61M 16/00 ;

Derwent Classes: P34;

Derwent Abstract: (SU1599026A) The hypoxic-therapy respiration apparatus has a mask (1) inhalation and exhalation valves (2,3) and canals, a carbon dioxide absorber (14), anti-dust filter (10), respiration reservoir (9), atmosphere air collector with calibrated aperture and body (13) with lid (17).

The atmosphere air collector is formed by a valve (18) mounted on the lid (17) of the body (13), made with a junction slot (19) communicating with the atmospheric and positioned with the possibility of rotation, additional calibrated apertures (20) made in the lid (17) of the body (13) and linked to the valve (18) and inhalation canal and an undersprung valve (21) mounted on the calibrated apertures (20) in the inhalation canal. The inhalation and exhalation valves (2,3) are positioned in the mask (1).

Advantage - This construction of the hypoxic-therapy respiration apparatus reduces the time taken to change the oxygen content of inhaled air. Bul. 38/15.10.90
